From 2019 to 2020, improved in 14 of 19 PMs

# Agenda

- Frequently Asked Questions about the new MIECHV Data Impact System
- Review of MIECHV Performance Measure Tips

## Impact system FAQs

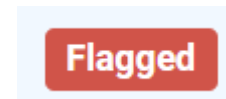

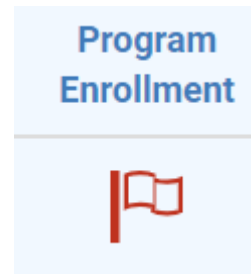

## CT Outcomes Survey

- AKA Children's Trust Supplemental Survey
- Given to caregivers to complete on paper at 12 months and at discharge (final visit)
- Updated version can be found in Front Porch
- Can be mailed to Jennifer Browder and will be entered into Impact system by her
- This is not for you to enter; it is just a reminder that it is due or to let you know that I have received it and entered the data

## Flagged Entry Won't Go Away

- You have entered the necessary data and re-saved the time point without flagging, yet the flag remains
  - ❖ You need to go back to the specific question that was flagged and unflag it, then save the time point and the flag will go away

## Impact system FAQs, continued

3 Month Visit Status	6 Month Visit Status
	
11/20/2020	02/27/2021

Client is in between data collection time points in the database and will be discharged before the next data collection timepoint, but you need to update a data point (e.g. well child visit, parent-child observation, etc.)

- Usually, I tell you to go to the last data time point, but since you can't edit the imported time points, you can go to next time point and enter data (even if its not due yet).
- You don't have to fill in all questions, just the ones you have an update for, then save.

## Did the family receive a discharge referral during the visit?

- Discharge=they will no longer be receiving services
- If this is your final visit with the family, choose yes and check any referrals that were provided
- If this is your final visit with the family & you are not referring them anywhere, choose no
- If this is not final visit, choose N/A family was not discharged at this time

## PM 1 & 2 Tips

### PM 1: Preterm Birth

- Update the estimated date of delivery if it is changed by the doctor

### PM 2: Breastfeeding

- Choose N/A if the mother was not enrolled prenatally

## PM 3 & 4 Tips

### PM 3: Depression Screening

- At all data collection time points, enter only the earliest, post-natal screen
- Database will eventually be pre-populated with your last answer and you can confirm or update
- All caregivers need a screening, even those already receiving treatment for depression

### PM 4: Well-Child Visit

- Record the date of the well-child visit and choose from the drop-down menu the visit that is closest to the child's age at the time of the visit

## PM 5 & 6 Tips

### PM 5: Postpartum Care Visit

- Choose N/A if the mother was not enrolled prenatally or if the mother has not delivered her baby yet
- If you choose N/A because the baby is not born yet, flag the data entry so that you will remember to update the postpartum visit date once the baby is born

### PM 6: Tobacco Cessation Referral

- Choose N/A if the caregiver is already receiving tobacco cessation services at enrollment
- If the caregiver uses tobacco at enrollment, immediately provide the referral

## PM 7 & 8 Tips

### PM 7: Safe Sleep

- If you are choosing "N/A child is not an infant less than one year of age", make sure that is true on the visit date of the data collection time point

### PM 8: Child Injury

- Only report injury/accident-related visits to the Emergency Room (Do NOT report illness-related, urgent care or minute clinic visits)

## PM 9 & 10 Tips

### PM 9: Child Maltreatment

- USC gets this data from DSS every year and it can't be reported by site

### PM 10: Parent-Child Interaction Observation

- All children 6 months of age or older at least one day in the reporting period (Oct. 1-Sept.30) must have a PCIO on record every reporting year
- Before you discharge a client, make sure you have a PCIO on record conducted since Oct 1 of the current year

## PM 11 & 12 Tips

### PM 11: Early Language & Literacy Activities

- Remind caregivers that singing also 'counts' for this PM (does a family member read, tell stories, and/or sing songs to the child?)

### PM 12: Developmental Screening

- HRSA requires that children be screened with the ASQ at 9, 18 & 24 months.
- Enter the most recent 9-, 18- or 24-month ASQ that was conducted.
- Prior to a 2-year-old being discharged, remember to do a 24-month ASQ screen.

## PM 13 & 14 Tips

### PM 13: Behavioral Concerns

- This question is asked of the caregiver at all post-natal home visits

### PM 14: IPV Screening

- All caregivers must be screened for IPV within six months of enrollment
- Only enter the earliest, post-enrollment screen in the database, do not enter subsequent screens that are done after six months post-enrollment (\*even though you may still conduct those screens for your model)

## PM 15 & 16 Tips

### PM 15: Primary Caregiver Education

- If a caregiver is being homeschooled after their baby is born, they are still considered enrolled in school

### PM 16: Continuity of Insurance Coverage

- This PM tracks if caregivers have continuously had insurance coverage for the prior six - month period

## PM 17 & 18 Tips

### PM 17: Completed Depression Referrals

- If you flag this data point, remember to go back & enter the date the services are received once the client has received treatment
- If a client is already receiving treatment for depression, you can choose 'N/A client already receiving services' & you don't have to refer them

### PM 18: Completed Developmental Referrals

- If you flag this data point, remember to go back & enter the date the services are received once the client has received services

## PM 19 Tip

### PM 19: Intimate Partner Violence Referral

- If possible, provide the IPV referral immediately after the positive screen
